

PRESS RELEASE

Targu Mureş at
22.05.2020

Azomureş maintains its certification in the field of Responsible Product Management/Product Stewardship.

Following an external audit, Azomureş once again demonstrated that it is one of the most important industrial plant in Europe, in its field of activity. Responsible Product Management/Product Stewardship is a certification that certifies the supply of high quality fertilizers to customers and users.

Azomureş, member of the European Fertilizer Producers Association, complies with the principle of "Responsible Care" and covers several aspects of "Sustainable Development", taking into account the entire life cycle of the product, from its development to its use.

Responsible Product Management sets requirements to increase the safety, security, health and environmental performance throughout the life cycle of fertilizers: research and development of new products, supply of raw materials/auxiliaries, product manufacturing, storage and packaging of products to the producer, marketing and sales, delivery and transport of products, storage of products at distributors, until the application of fertilizers and reuse, recycling and/or disposal of packaging waste. Applies to mineral fertilizers, raw materials and intermediate products.

The external recertification audit on the degree of implementation of the requirements of the Standard was performed by an external auditor, appointed by the certification body SGS Great Britain.
